전반을 안내하고 있습니다.

The story behind the image

Antarctica meltdown could double sea level rise

Researchers at Pennsylvania State University have been considering how quickly a glacial ice melt in Antarctica would raise sea levels. By updating models with new discoveries and comparing them with past sea-level rise events they predict that a melting Antarctica could raise oceans by more than 3 feet by the end of the century if greenhouse gas emissions continued unabated, roughly doubling previous total sea-level rise estimates. Rising seas could put many of the world's coastlines underwater or at risk of flooding and storm surges.

The screenshot shows the top navigation bar of the Nature.com website. On the left, there is a 'Menu' dropdown button. In the center is the 'nature' logo. On the right, there are links for 'Subscribe', 'Search' (with a magnifying glass icon), and 'Login' (with a user icon). Below the navigation bar, the 'Article Search' section is visible, featuring a search input field with the placeholder text 'Search by keywords or author' and a 'Search' button. Below the search bar, there is a link for 'Advanced search'. At the bottom of the screenshot, the 'Quick links' section is displayed, containing links for 'Explore articles by subject', 'Find a job', 'Guide to authors', and 'Editorial policies'. Two callout boxes with arrows point to specific elements: one points to the 'Advanced search' link, and the other points to the 'Search' link in the navigation bar.

Abstract

Novel food technologies are important for food security, safety and sustainability. Consumers, however, are often hesitant to accept them. In this narrative Review, we organize the research describing how heuristics and individual differences among consumers influence the acceptance of agri-food technologies. Associations evoked by a food

Online attention

46 tweeters

2 blogs

This article is in the 93rd percentile (ranked 11,126th) of the 166,183 tracked articles of a similar age in all journals and the 66th percentile (ranked 6th) of the 18 tracked articles of a similar age in *Nature Food*

Altmetric calculates a score based on the online attention an article receives. Each coloured thread in the circle represents a different type of online attention. The number in the centre is the Altmetric score. Social media and mainstream news media are the main sources that calculate the score. Reference managers such as Mendeley are also tracked but do not contribute to the score. Older articles often score higher because they have had more time to attract attention. To
